Password Changed to the value given by the attacker
SOE
SONY ONLINE ENTERTAINMENT
24.8 million users' details stolen, credit card information also at risk.

How it is happening?

KYI

Know your Infrastructure

-Get the list of services and interfaces

-What are the listening ports and what is behind them

-Lock default admin and maintenance users, disable unused services

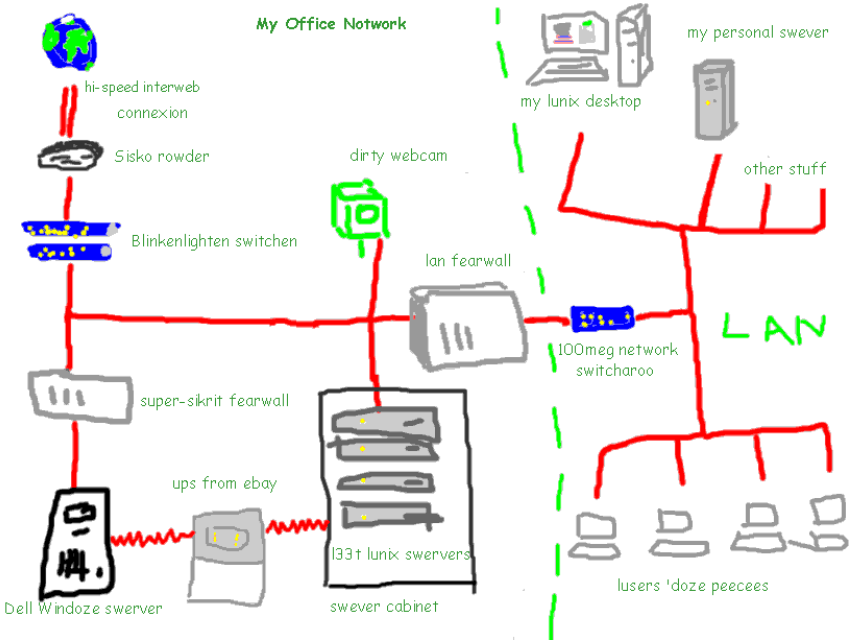
DRAW

Network diagrams

-Make them comprehensive, include all incoming and outgoing connections

-Keep updated

-Send them to Group Security to review



HARDEN IT

-Harden endpoints, do not rely on external perimeter protection

-Intranet of 50k+ hosts could not be “trusted zone”

-Configure proper authorization, lockouts

-Log everything

PATCH IT

-Automated patching from trusted source

-Patching level verification

-Subscribe on ComCert

-Vulnerability scanning

SPEAK

-Contact with IT colleagues, you should not know everything

-Get an advice from Group Security

-Share your concerns, make your management aware of risks
